DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 13 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 13 and 14 are indefinite because it is unclear how a sub-atmospheric pressure of 1.0×10^{-10} MPa would limit the pressurized state recited in claim 1. Also, the symbol “~” should be changed to “x” to be clear and consistent with the specification.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 15, 16, 34 and 35 are rejected under 35 U.S.C. 102(e) as being anticipated by Mao et al. (2003/0089117 A1).

5. Mao et al. '117 teach a process of forming a hydrogen clathrate with a water host compound under pressure (see claims 22, 30). The disclosure is enabled in provisional application No. 60/330,749.

6. Claims 1, 2, 13 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Klos et al. (6,309,449).

7. Klos et al. '449 teach a process for storing hydrogen on carbon nanotubes that may be supported on a porous matrix under pressure (see abstract, col. 4, lines 41-50, claims 1, 2, 23).

8. Claims 1, 13 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 53-14513.

9. JP '513 teaches a process for storing hydrogen comprising contacting the hydrogen with a ketone reaction product with a catalyst under a positive pressure such as 100-150 ATM. An oral translation of the reference was obtained at the Patent Office.

Allowable Subject Matter

10. Claims 25-33 are allowed.

11. The following is an examiner's statement of reasons for allowance: The prior art of record fails to disclose or suggest a production method of a hydrogen clathrate wherein a host compound is dissolved into a solvent, then recrystallized with injecting hydrogen, wherein hydrogen molecules are inserted into the crystal lattice of the host compound.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

12. Claims 3-12, 17-24 and 36-40 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

13. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references listed on the attached PTO-892 disclose hydrogen storage devices and clathrate compounds.
